

# Cms Advanced custom fields

## Step 1. Install module

1. Download the module from Magento marketplace (like zip or tar.gz archive in “My Account” > “My Downloadable Products”)
2. Login to your Magento 2.x Hosting site using FTP connection.
3. Go to your root directory where Magento 2.x is installed. And go in the folder app/code/.
4. In app/code folder, make a folder “Matritix” and unzip inside the AdvancedCmsFields folder contained in the zip.
5. Login to your Magento 2.x Hosting site using SSH connection (for details contact your hosting provider).
6. After successful SSH login, using the command line (shell), open the Magento root directory where Magento 2.x is installed.
7. Enter this command line :
  - a. `php bin/magento module:enable Matritix_AdvancedCmsFields`
  - b. `php bin/magento setup:upgrade`
  - c. `php bin/magento setup:static-content:deploy` (if you are in production mode)

The module is installed now!

## Step 2. Extension usage

Go to your Magento 2 backoffice.

And go to Content > Page or Content > Block (depend what you want to do), now in the “Content” section under your native WYSIWYG you have a table (dynamic rows) where you can add unlimited fields and choose for each the type (text,textarea, link, images or files).

You can choose the order of each field, that determine the order of the display in the front office. In this field (order), bigger the number is, lower the field will be.
